16	Track Changes & Reviewing
17	Mail Merge Basics
18	Long Documents: TOC & Footnotes
19	Sharing, Exporting & Printing
20	Final Project: Build Your CV

Recap: Chapter 11

1

Pictures Insert at the Cursor

Click first to choose exactly where an image lands.

2

Shapes Come with Fill and Outline

The Shape Format tab controls both.

3

Text Wrap Controls the Flow

Square and Tight are the two most useful styles.

4

Corner Handles Resize Safely

Dragging a corner keeps the image in proportion.

Preview

Today's Objectives

1

Apply Built-in Styles

Give headings and text a consistent look with one click.

2

Use Document Themes

Change the colors, fonts, and effects across the whole document at once.

3

Modify an Existing Style

Change a style once, and update every place it is used.

4

Create a Custom Style

Save a look you like so you can reuse it anytime.

Built-in Styles

1

What a Style Is

A style is a saved set of formatting. It includes font, size, color, and spacing.

2

The Styles Gallery

Home tab → Styles gallery. It shows Heading 1, Heading 2, Normal, and more.

3

Why Use Styles

Styles keep every heading consistent. Change the style once, and every heading updates.

4

Styles Build the Table of Contents

Word uses Heading styles to build a Table of Contents automatically, later on.

Document Themes

1

What a Theme Is

A theme is a matched set of colors, fonts, and effects for the whole document.

2

Design Tab → Themes

Design tab → Themes. One click changes colors and fonts everywhere at once.

3

Theme Colors & Fonts

Design tab → Colors or Fonts. This lets you swap just one part of a theme.

4

Themes Keep Documents Consistent

Every style on the page follows the same theme automatically.

Theory · [Modifying a Style](#)

Modifying a Style

1

Right-Click a Style

Right-click any style in the gallery. Choose Modify to change it.

2

Update to Match Selection

Format text by hand. Then right-click its style and choose Update to Match Selection.

3

Changes Apply Everywhere

Modifying a style updates every place it is used in the document.

4

Modify Dialog Options

The Modify dialog controls font, size, color, and spacing, all in one place.

Creating a Custom Style

1

Format Text First

Format a piece of text exactly how you want your new style to look.

2

Save as a New Style

Styles gallery → Create a Style. Give it a name and save it.

3

Custom Styles Appear in the Gallery

Your new style shows up next to the built-in ones, ready to reuse.

4

When to Create One

Useful for a look you will repeat often, like a note or quote box.

PRACTICE

Style a Report

1

Type a Heading

Type “Monthly Progress Report” on its own line.

2

Apply Heading 1

Select that line. Apply the Heading 1 style from the Styles gallery.

3

Type a Subheading

Below it, type “Attendance Summary.” Apply the Heading 2 style.

4

Type Body Text

Below that, type one sentence. Confirm it uses the Normal style.

PRACTICE

Change the Theme

1

Open the Themes Gallery

Design tab → Themes. Look at the current theme's name.

2

Try a New Theme

Click a different theme. Watch your headings change color and font.

3

Change Just the Colors

Design tab → Colors. Pick a new color set without changing the fonts.

4

Return to the Original

Switch back to the first theme you used, to reset the look.

Wrap-Up

Key Takeaways

1

Styles Save Time

One click applies a full set of formatting at once.

2

Themes Control the Whole Look

Colors, fonts, and effects change together, everywhere.

3

Modify Once, Update Everywhere

Changing a style updates every place it is used.

4

Custom Styles Are Reusable

Save a look you like once, then apply it again anytime.

Next up — Chapter 13: Using Templates
