Recap: Chapter 12

1

Styles Save Time

One click applies a full set of formatting at once.

2

Themes Control the Whole Look

Colors, fonts, and effects change together, everywhere.

3

Modify Once, Update Everywhere

Changing a style updates every place it is used.

4

Custom Styles Are Reusable

Save a look you like once, then apply it again anytime.

Preview

Today's Objectives

1

Understand What Templates Are

See how a template gives you a head start on layout and style.

2

Use a Built-in Template

Start a new document from one of Word's ready-made designs.

3

Find Templates Online

Search Office.com for more variety than Word includes by default.

4

Save Your Own Template

Turn a document you like into a reusable starting point.

What Templates Are

1

A Template Is a Starting Point

It is a ready-made document. Layout, styles, and sample text are already in place.

2

Why Use Templates

They save time. They give your document a professional structure from the start.

3

Templates vs. Themes

A theme changes colors and fonts. A template also includes layout and sample content.

4

Common Template Types

Resumes, letters, reports, flyers, and certificates are common examples.

Using a Built-in Template

1

File → New

File tab → New shows a gallery of templates built into Word.

2

Preview Before Choosing

Click a template thumbnail to see a larger preview before opening it.

3

Replace the Placeholder Text

Click into any sample text and type your own. It replaces automatically.

4

Save As a New File

Save As right away. This keeps you from overwriting the original template.

Finding Templates Online

1

Search the Online Gallery

File tab → New. Type a keyword like “resume” or “flyer” to search online templates.

2

More Variety Than Built-in

Office.com hosts far more templates than the ones stored in Word itself.

3

Requires Internet Access

Online templates download when you pick them. You will need a connection.

4

Check Before You Commit

Preview the layout carefully. Some online templates need heavy editing to fit your needs.

[Theory](#) · [Saving a Template](#)

Saving Your Own Template

1

Build the Document First

Format a document exactly how you want future versions to start.

2

Save As → Word Template

File tab → Save As. Change the file type to Word Template (.dotx).

3

Where Templates Are Stored

Word saves templates to a special folder, so they appear in File → New.

4

Reusing Your Template

Open it like any file. Word gives you a fresh copy and keeps the original safe.

PRACTICE

Start From a Template

1

Open the Template Gallery

File tab → New. Browse the built-in templates.

2

Choose a Simple One

Pick a basic letter or report template and open it.

3

Replace the Title

Click the placeholder title and type “Hunar Institute Notice.”

4

Save As a New File

Save As. Name it YourName_Template.docx so the original stays untouched.

PRACTICE

Create a Reusable Template

1

Format a Simple Layout

Type “Attendance Sheet” as a bold, centered heading.

2

Add a Placeholder Line

Below it, type “Date: [Insert Date Here].”

3

Save As a Template

File tab → Save As. Change the file type to Word Template (.dotx).

4

Confirm It Saved

Check File → New. Your template should now appear in the list.

Wrap-Up

Key Takeaways

1

Templates Save Setup Time

Layout, styles, and structure are ready before you type a word.

2

Built-in and Online Both Work

File → New covers both, right from the same screen.

3

Always Save As First

Protect the original template by saving your copy under a new name.

4

Your Own Templates Are Reusable

Save As Word Template (.dotx) to build your own starting points.

Next up — Chapter 14: Spelling, Grammar & Proofing
