Unit 12
Charts in Excel

Microsoft Excel | Pie, Column, Line Charts

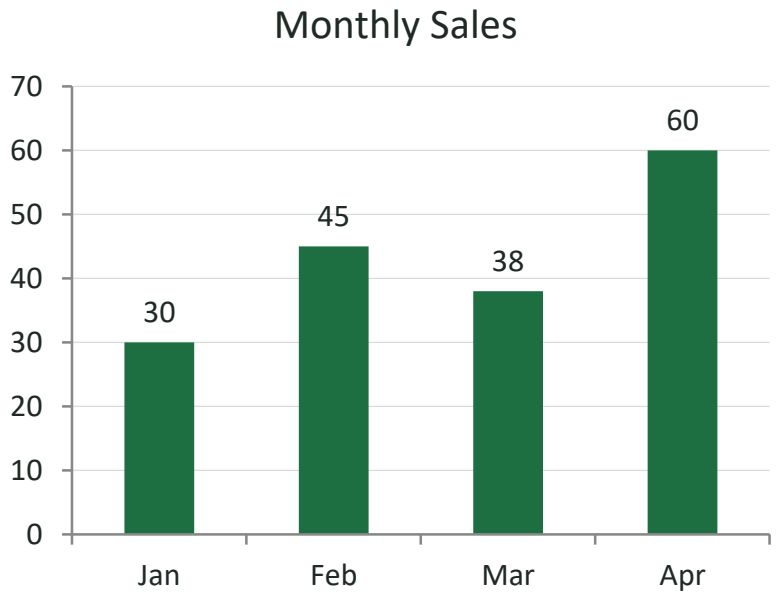

Hunar Institute of Vocational Training | Sir M. Khan Jamali

12.1 What Is a Chart?

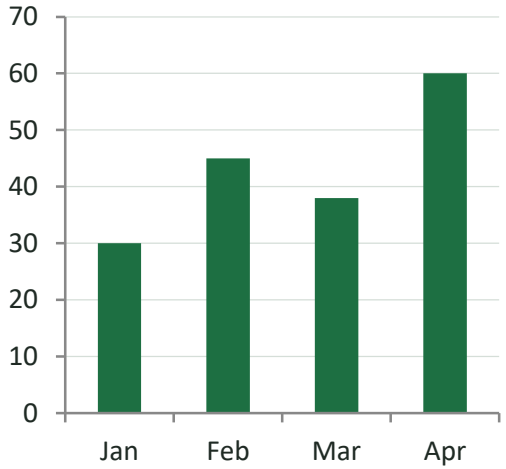

A chart is a picture of your data.

- Numbers in cells are hard to compare
- A chart shows the story at a glance
- Charts make reports and projects clearer

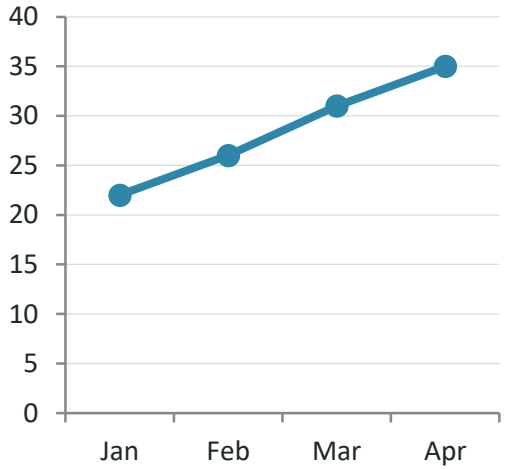

Same numbers, much easier to see

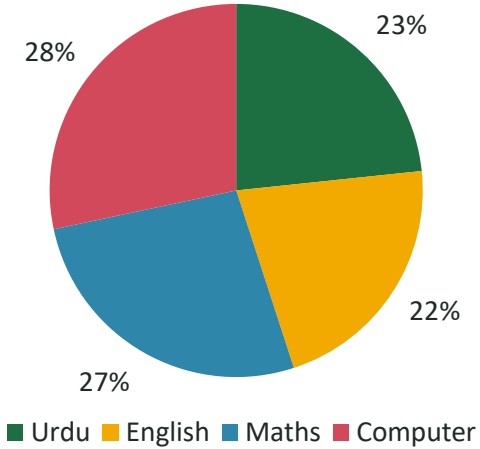

12.2 Common Chart Types

Bar (Column)
Compare values

Line
Show change over time

Pie
Show parts of a whole

12.3 Which Chart to Use?

Compare the marks of 5 students	→	**Bar**
Show the temperature every day	→	**Line**
Show each subject’s share of total marks	→	**Pie**

Rule of thumb: Bar = compare items, Line = change over time, Pie = parts of a whole

12.4 Make a Chart in 4 Steps

1

Select

Highlight your data, including the headings

2

Insert

Click the Insert tab

3

Choose

Pick a chart from the Charts group

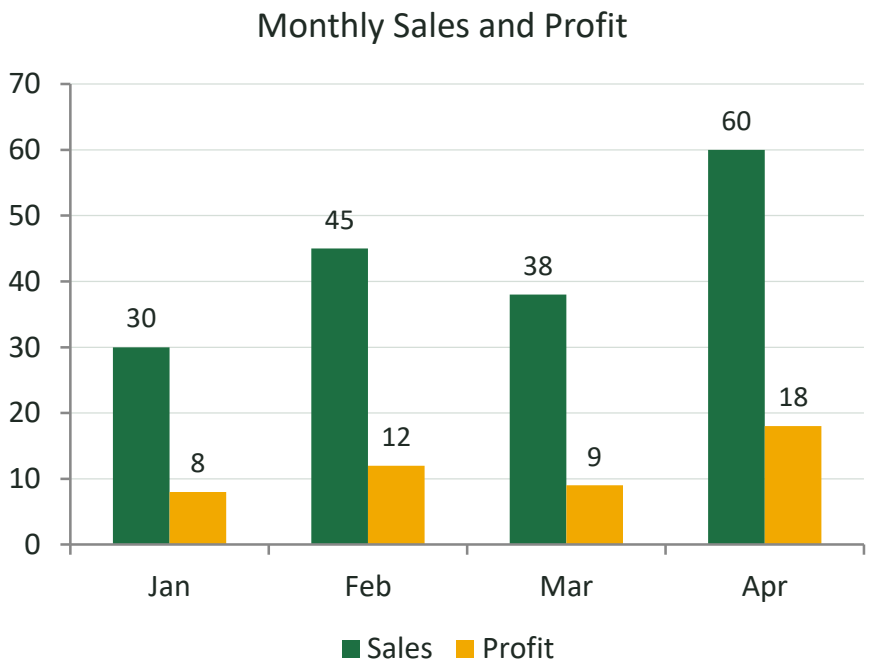

4

Adjust

Drag to move it, use the corners to resize

Tip: not sure which chart to pick? Click **Recommended Charts**. Quick chart: select the data and press **Alt + F1**.

12.5 Parts of a Chart

- **Chart title**
  Tells what the chart is about
- **Axes**
  Labels along the bottom and side
- **Legend**
  Explains what each colour means
- **Data labels**
  Show the exact numbers

Click the chart, then use the + button or the Design tab to change these.

12.6 Make It Your Own

+ Chart Elements	Add or remove the title, labels and legend
Chart Styles	Pick a new look and new colours
Change Chart Type	Design tab: switch between Bar, Line and Pie

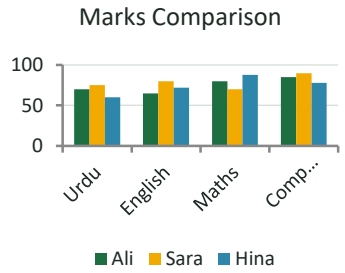

Tip: click the chart first. Small buttons appear at its top-right corner, and the Design tab appears on the ribbon.

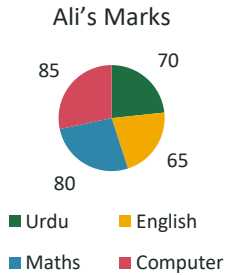

Exercise 12A: Marks Charts

Goal: Compare students, then check one

1. Type the data in **A1:E4** (as shown)
2. Select **A1:E4**
3. Click **Insert → Column or Bar Chart → Clustered Column**
4. Select **B1:E1**, hold **Ctrl**, then select **B2:E2** (Ali only)
5. Click **Insert → Pie Chart → 2-D Pie**
6. Add a **Chart Title** to each chart, then save as **Charts_Practice**

Student	Urdu	English	Maths	Computer
Ali	70	65	80	85
Sara	75	80	70	90
Hina	60	72	88	78

How your finished sheet should look

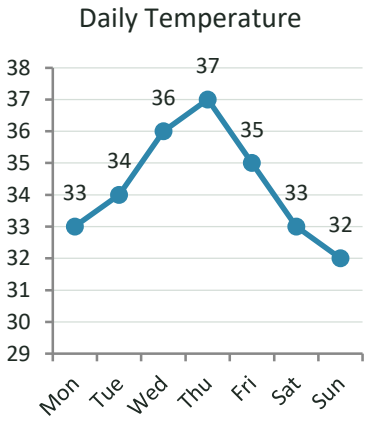

Show your teacher: a bar chart of all students and a pie chart of Ali

Exercise 12B: Line Chart

Goal: Show how temperature changes

1. Type the data in **A1:B8** (as shown)
2. Select **A1:B8**
3. Click **Insert → Line or Area Chart → Line with Markers**
4. Click the chart title and type **Daily Temperature**
5. Click the **+** button and tick **Data Labels**
6. Save the file as **Line_Practice**

Day	Temp (°C)
Mon	33
Tue	34
Wed	36
Thu	37
Fri	35
Sat	33
Sun	32

How your finished sheet should look

Show your teacher: a line chart of the week's temperature with a title and data labels

Quick Check

1. Which chart shows change over time?
2. Which chart compares the marks of 5 students?
3. Which chart shows each subject’s share of total marks?
4. Which tab do you click to insert a chart?

Answers: 1 Line | 2 Bar | 3 Pie | 4 Insert

12.7 Key Takeaways

1. Charts turn numbers into pictures
2. Bar compares, Line shows change, Pie shows parts
3. Select your data, then Insert and pick a chart
4. Add a clear title and keep it simple
