UNIT 01 • DAY 01

INTRODUCTION TO POWERPOINT

What it is. Where it is used.
How to find your way around the screen.

MS OFFICE / COMPUTER OPERATOR

Slides by Sir M Khan Jamali

START WITH A FAMILIAR PROBLEM

How would you explain a big topic clearly?

Imagine teaching “computer hardware” to a room full of students.

ONE LONG EXPLANATION

COMPUTER HARDWARE

Keyboard, mouse, monitor,
printer, speakers, storage…

Everything together can feel crowded.

ONE IDEA AT A TIME

HARDWARE

Physical parts

INPUT

Keyboard
Mouse

OUTPUT

Monitor
Printer

Smaller steps make the lesson easier to follow.

PowerPoint helps us organize information into slides.

What is Microsoft PowerPoint?

A presentation is information shown to an audience, usually one slide at a time.

MICROSOFT POWERPOINT

Presentation software

It helps us create and show slides.

Think of it as a story told one slide at a time.

SLIDE = ONE PAGE OF A PRESENTATION

Where do we see presentations?

PowerPoint is used wherever people need to explain, teach, report, or share information.

S

SCHOOL

Lessons, class projects

B

BUSINESS

Reports, sales pitches

T

TRAINING

Workshops, skill courses

E

EVENTS

Conferences, celebrations

H

HOME

Family photos, memories

O

ONLINE

Webinars, video lessons

Can you name another place where you have seen a presentation?

One slide. One main idea.

Slides divide a large topic into smaller parts that are easier to understand.

01

INTRODUCTION

What is hardware?

→

02

INPUT DEVICES

Keyboard • Mouse

→

03

OUTPUT DEVICES

Monitor • Printer

→

04

STORAGE

Hard drive • USB

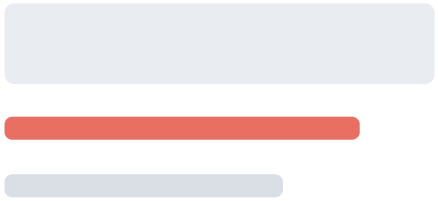

Why? The audience can follow the lesson step by step instead of reading everything at once.

What can we put on a slide?

PowerPoint combines words and visuals so information is easier to understand.

WORDS

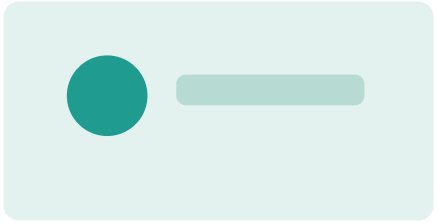

TEXT

Titles, headings, short explanations

VISUALS

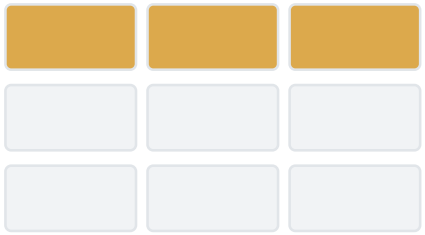

PICTURES

Photos and images that show an example

STRUCTURE

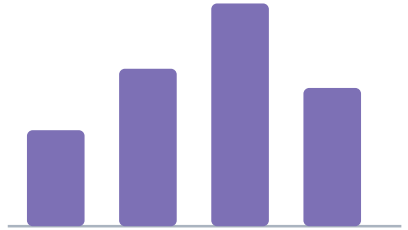

TABLES

Rows and columns for organized facts

DATA

CHARTS

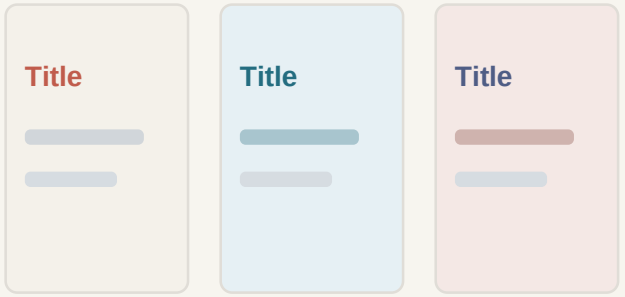

A visual way to compare numbers

A picture can explain something faster than a long paragraph.

Themes give slides a consistent look.

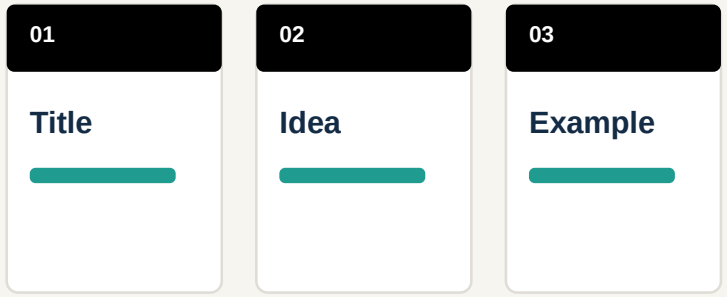

A theme is a ready-made combination of colours, fonts, and visual styles.

WITHOUT A THEME

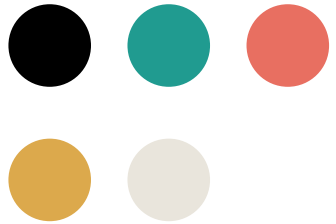

Different colours and styles can feel disconnected.

WITH ONE THEME

Same colours and fonts make the slides feel connected.

THEME PALETTE

Reuse this palette across slides.

Why use a theme? Save design time and keep the presentation consistent.

Transition or animation?

Both add movement, but they affect different things.

TRANSITION

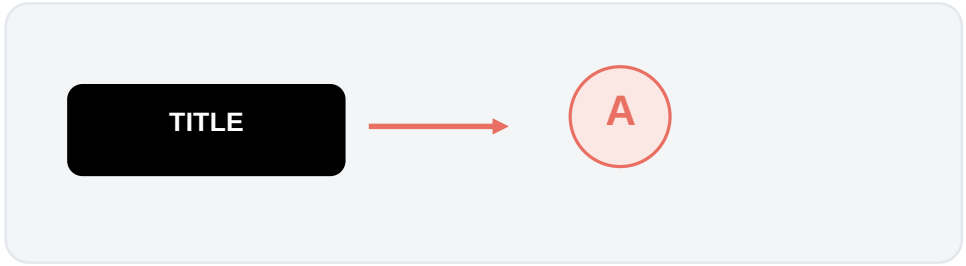

Between slides

Example: Fade from Slide 1 to Slide 2.

ANIMATION

On an object

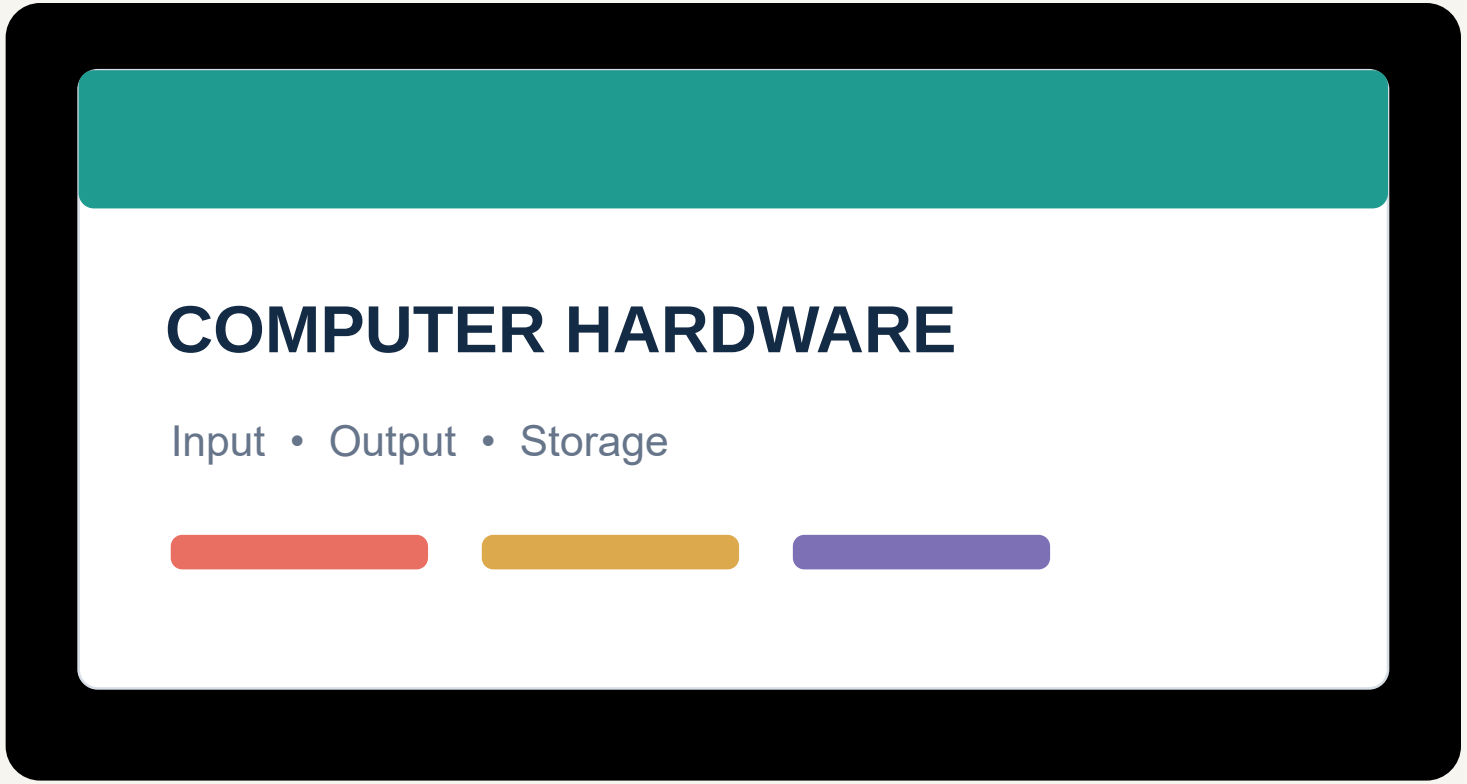

Text or a picture appears on the slide.

Remember: Transition = slide-to-slide • Animation = object on a slide

Slide Show: show the presentation to an audience.

When it is time to present, the slides take focus—not the editing tools.

FULL-SCREEN VIEW

Why? The audience can focus on the content.

How to start PowerPoint

On a Windows computer, use Start search to find the program.

1 **Click Start**

Press the Windows key or click Start.

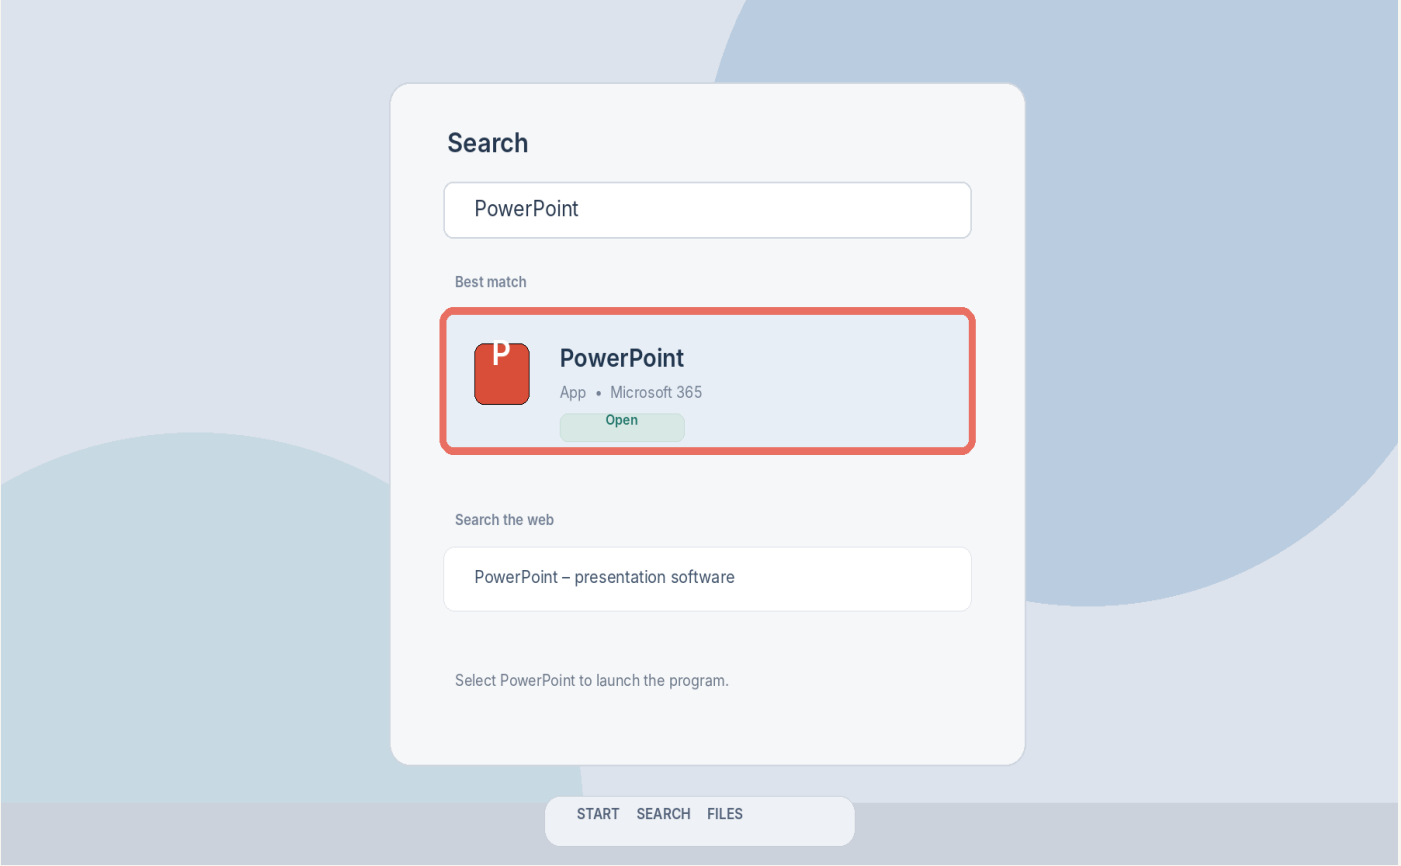

2 **Search**

Type “PowerPoint” in the search box.

3 **Open**

Choose PowerPoint from the results.

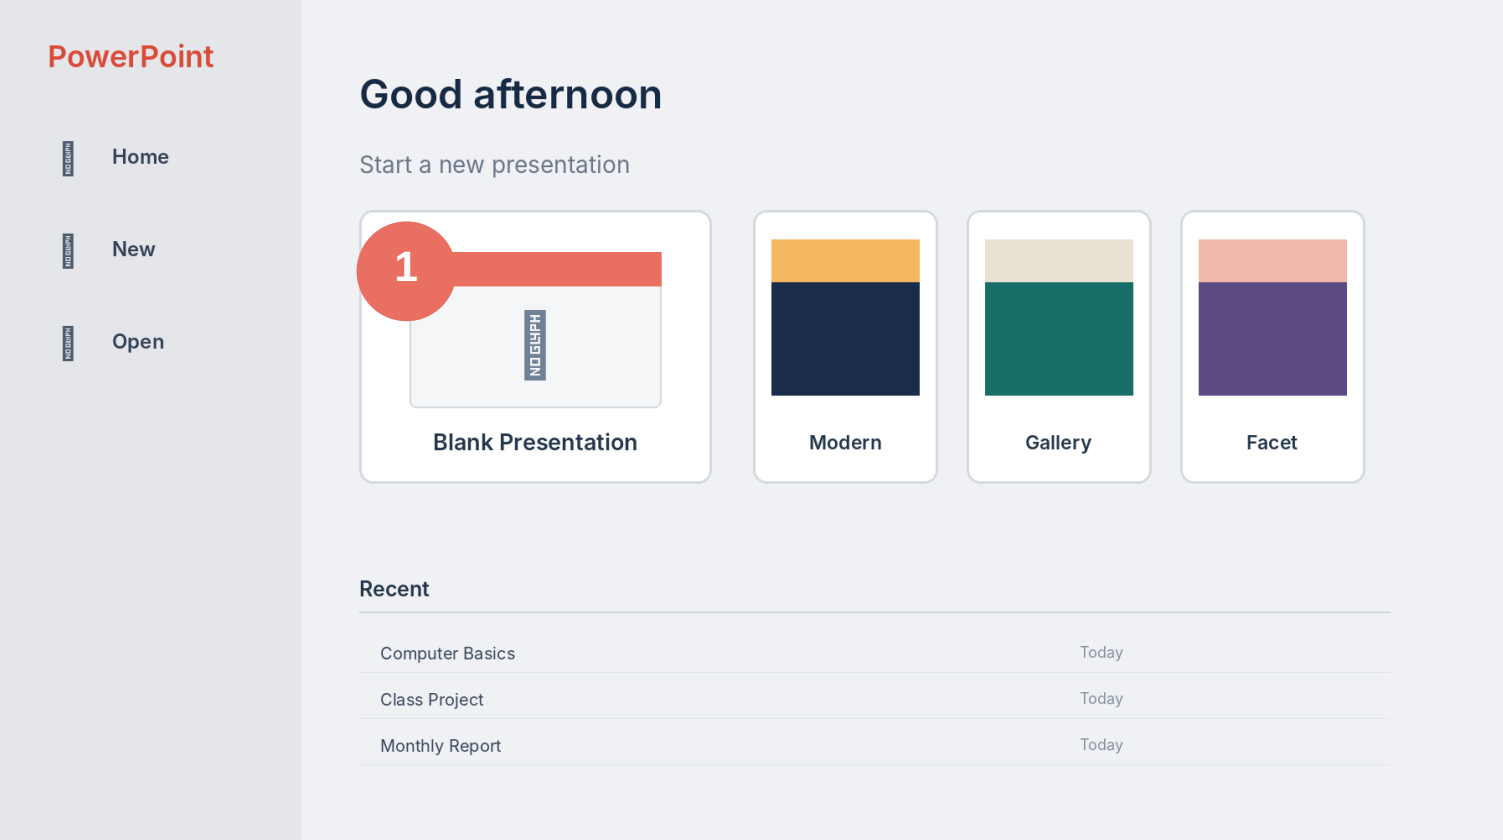

Shortcut: Double-click the PowerPoint icon.

Illustrative Windows search screen • your layout may vary

Choose Blank Presentation to begin from scratch.

A blank presentation has no lesson content yet. You add your own slides and information.

1 Click Blank Presentation

2 A new presentation opens

BLANK

Start with an empty slide deck.

Why choose it?

You control the topic, order, text, pictures and design.

Open a saved file. Close it safely.

Opening PowerPoint is not the same as opening a presentation you saved earlier.

OPEN

File → Open → Browse

Find the folder, select the presentation, then click Open.

Ctrl + O

SAVE

Keep your latest changes

Save stores your edits so you can use them later.

Ctrl + S

CLOSE

File → Close

Close the current presentation when you finish.

Ctrl + W

Save your changes?

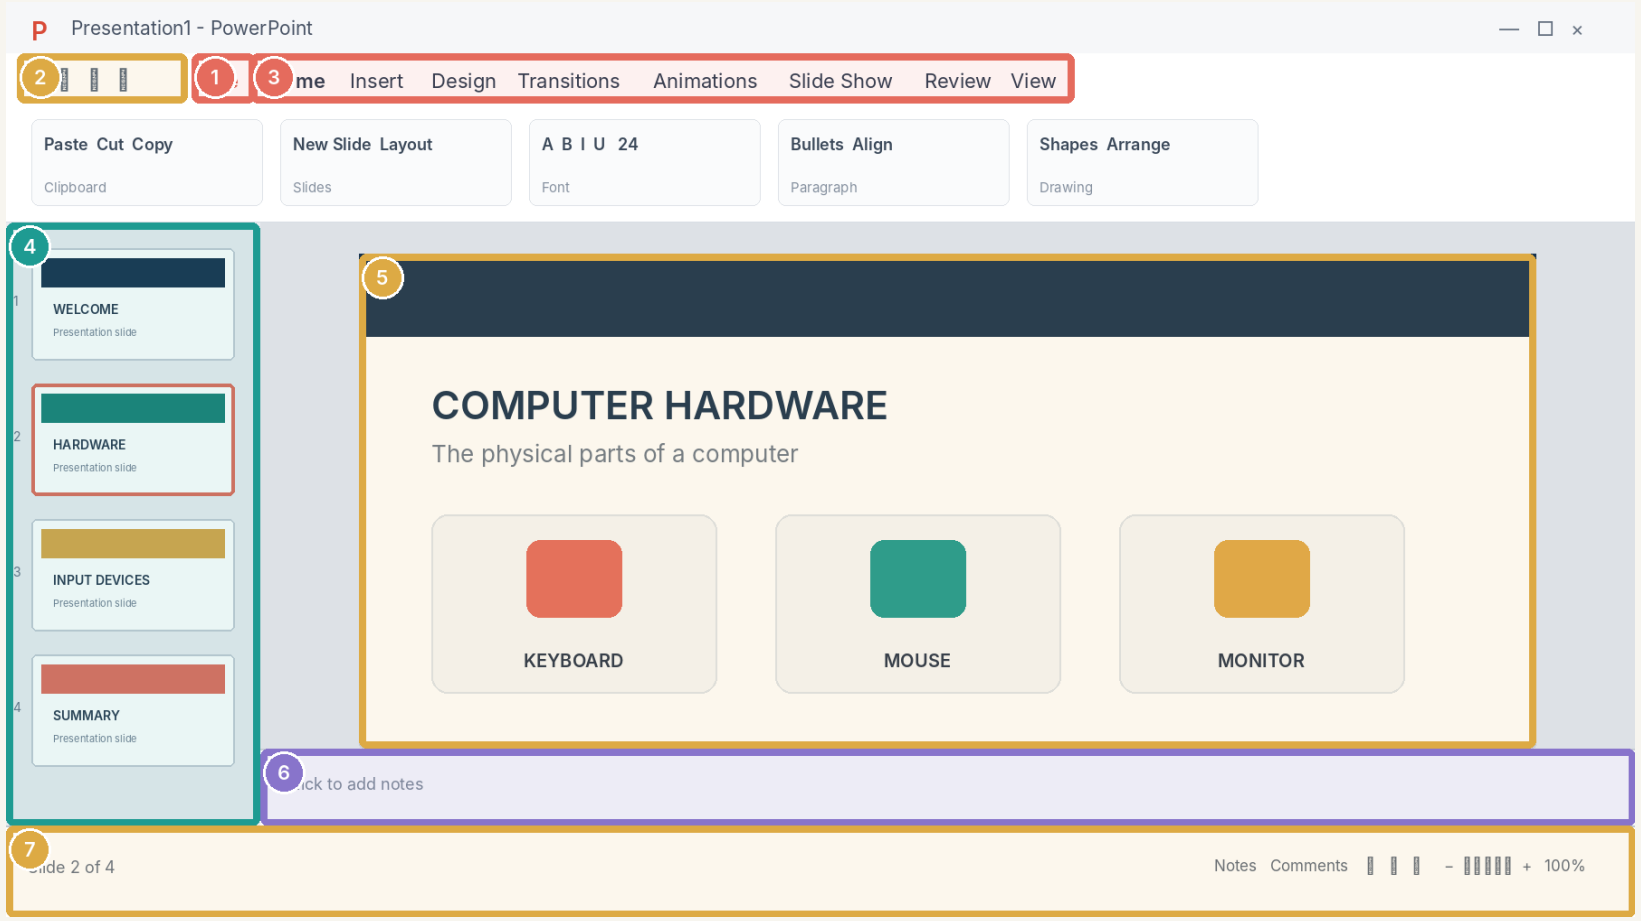

SAVE Keep edits

DON'T SAVE Discard edits

CANCEL Return to file

The PowerPoint screen at a glance

Learn the names first. The tools will make more sense when you use them.

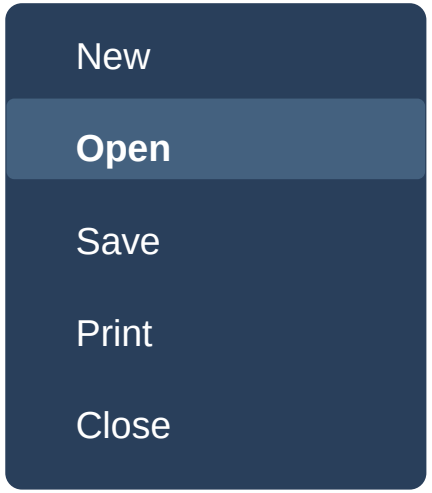

Illustrative PowerPoint 2016-style screen map

1. **File tab** — Manage files
2. **Quick Access Toolbar** — Frequent commands
3. **Ribbon tabs** — Find tools
4. **Slides panel** — Choose a slide
5. **Slide pane** — Edit the slide
6. **Notes section** — Presenter reminders
7. **Status bar** — Slide info & views

Two places you will use often

The File tab manages the presentation. The Quick Access Toolbar gives fast commands.

FILE TAB

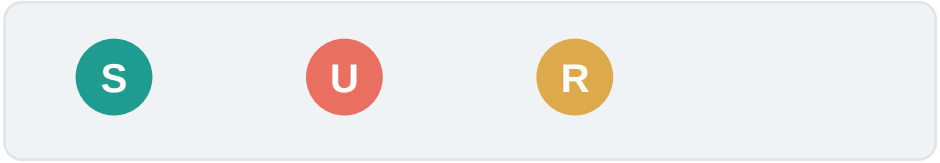

What is it?

The file-management area.

Why use it?

To create, open, save, print
or close a presentation.

QUICK ACCESS TOOLBAR

SAVE	**Ctrl + S**	Keep changes
UNDO	**Ctrl + Z**	Reverse last action
REDO	**Ctrl + Y**	Restore undone action

Ribbon tabs group tools by task.

Click a tab to see the commands related to that kind of work.

HOME

Text & slide basics

INSERT

Pictures, shapes, tables

DESIGN

Themes & backgrounds

TRANSITIONS

Movement between slides

ANIMATIONS

Movement on slide objects

SLIDE SHOW

Present the slides

REVIEW

Spelling & review

VIEW

Change screen view

Example: To insert a picture → click Insert. To change the theme → click Design.

Where do you actually work?

The middle and bottom areas help you select, edit, and prepare your slides.

SLIDES PANEL

Click a thumbnail to open its slide.

EXAMPLE

Choose Slide 7 without clicking through every slide.

SLIDE PANE

The large working area for the selected slide.

EXAMPLE

Type a title, add a picture, or arrange shapes here.

NOTES SECTION

A private space for speaker notes.

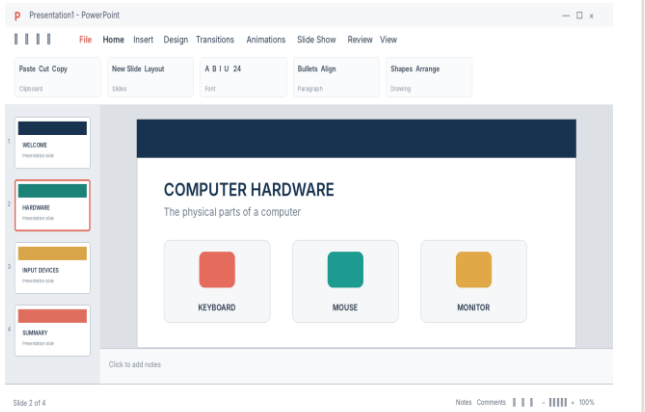

EXAMPLE

Write reminders for what you want to explain.

STATUS BAR • Bottom of the window: shows slide information and gives quick view controls.

Three views. Three different jobs.

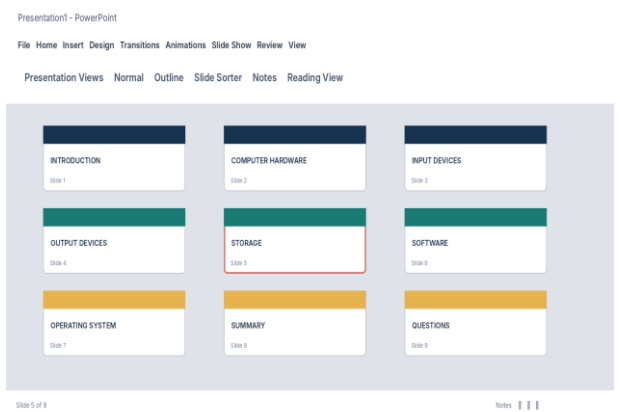

Switch views from the View tab or the view buttons on the Status bar.

NORMAL

Create & edit

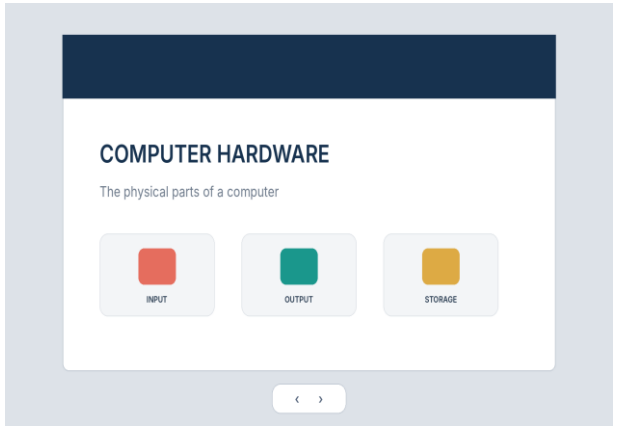

Use this view to work on one slide.

SLIDE SORTER

Organize slides

Drag a slide to change its order.

READING VIEW

Review slides

Read the slides in a window.

Esc returns from Reading View to the PowerPoint window.

What should you remember from today?

You do not need to memorize every button. Understand what each area is for.

1. **WHAT** — PowerPoint creates presentations made of slides.
2. **WHY** — It helps explain information visually and in order.
3. **FEATURES** — Text, pictures, tables, charts, themes and motion.
4. **START** — Start menu → PowerPoint → Blank Presentation.

CHECK YOUR UNDERSTANDING

Questions:

- What is a slide?
- Which tab inserts pictures?
- What is the difference between transition and animation?
- Which view helps reorder slides?

Next lesson: creating and saving your first presentation.
