[Recap](#) · [Chapter 6](#)

Recap: Chapter 6

1

Bullets = No Order, Numbers = Order

Pick based on whether sequence matters.

2

Tab Builds Levels

Tab and Shift+Tab move a line deeper or shallower in a multilevel list.

3

Word Renumbers Automatically

Insert or delete a step and the rest of the list updates itself.

4

Styles Are Customizable

Define New Bullet or Number Format gives full control over how a list looks.

Preview

Today's Objectives

1

Adjust Margins

Set preset or custom margins so a document has the right amount of breathing room.

2

Set Orientation & Paper Size

Switch a page between portrait and landscape, and match it to the right paper size.

3

Add Columns

Split a page into newspaper-style columns for newsletters or reference sheets.

4

Insert Page & Section Breaks

Start new pages cleanly and let one section have different layout rules than another.

Margins

1

What Margins Are

The blank space around the edges of a page — where text normally doesn't go.

2

The Margins Button

Layout tab → Margins — pick a preset like Normal, Narrow, or Wide.

3

Custom Margins

Layout tab → Margins → Custom Margins lets you set an exact measurement for each side.

4

Why Margins Matter

Consistent margins make a document look professional and leave room for binding or printing.

[Theory](#) · [Orientation & Paper Size](#)

Orientation & Paper Size

1

Portrait vs. Landscape

Portrait is taller than wide. It is the default view.

Landscape is wider than tall. It works well for tables or wide charts.

2

The Orientation Button

Layout tab → Orientation — switches the whole page between portrait and landscape.

3

The Size Button

Layout tab → Size — choose A4, Letter, Legal, or a custom paper size.

4

Match Your Printer

Always confirm your paper size matches what's actually loaded in the printer.

Columns

1

What Columns Do

Split the page into two or more vertical blocks of text, like a newspaper.

2

The Columns Button

Layout tab → Columns — choose one, two, three, or a custom layout.

3

Column Breaks

Layout tab → Breaks → Column forces text to jump to the next column early.

4

When to Use Columns

Newsletters, brochures, and reference sheets — not everyday letters or reports.

Page Breaks & Section Breaks

1

Page Break (Ctrl+Enter)

Forces the next line to start on a brand new page, no matter how much space is left.

2

Why Not Just Press Enter

Repeatedly pressing Enter to reach a new page breaks the layout if text is edited later.

3

Section Breaks

Layout tab → Breaks → Section Breaks. This lets one part of a document use different margins or orientation.

4

Removing a Break

Turn on Show/Hide (Ctrl+Shift+8) to see and delete breaks like any other character.

PRACTICE

Set Report Margins

1

Type the Heading

Open a new blank document and type the heading “Monthly Progress Report.”

2

Apply Narrow Margins

Layout tab → Margins → Narrow — the text area should visibly widen.

3

Try Custom Margins

Layout tab → Margins → Custom Margins — set Top and Bottom to 1”, Left and Right to 0.75”.

4

Compare the Difference

Switch to Normal margins for a moment. Then switch back to your custom ones. Notice how much the text area changes.

PRACTICE

Switch Page Setup

1

Change to Landscape

Layout tab → Orientation → Landscape — your report heading should now sit on a wider page.

2

Switch Back to Portrait

Layout tab → Orientation → Portrait — confirm the page returns to its normal shape.

3

Change the Paper Size

Layout tab → Size → Letter — notice the page dimensions update.

4

Set the Final Size

Set the paper size back to A4, the standard used at Hunar Institute.

Wrap-Up

Key Takeaways

1

Margins Frame the Page

Consistent margins make any document look more professional.

2

Orientation Fits the Content

Landscape suits wide tables and charts. Portrait works well for everything else.

3

Columns Are for Layouts, Not Letters

Save columns for newsletters and reference sheets.

4

Page Breaks Beat Extra Enters

Ctrl+Enter keeps your layout stable even after future edits.

Next up — Chapter 8: Headers, Footers & Page Numbers
