▲ TODAY

Today's Objectives

1

What Is the Internet?

Describe how devices connect and share data worldwide.

2

Internet vs. the Web

Explain how the WWW runs on top of the internet.

3

Trace How a Page Loads

Walk through what happens after you press Enter.

4

Compare Search Engines

Identify general, specialised, and privacy-first options.

 We'll close with a 4-question recap — keep these four goals in mind.

CHAPTER 01

Internet Fundamentals

What is the internet, how it works, and how to search

What is the Internet?

A global network of billions of connected devices sharing information using TCP/IP protocols.

Servers & Clients

Servers host content; your device requests & displays it

Data in Packets

Info travels in small chunks across multiple routers

TCP/IP Protocol

Ensures reliable delivery across all networks worldwide

Key Milestones

1969

ARPANET

1983

TCP/IP

1989

WWW born

1990s

Public web

Today

5.3B users

Internet vs. World Wide Web

The Internet

- Physical cables & routers
- Connects devices worldwide
- The infrastructure layer
- Existed before the WWW

VS

The WWW

- Web pages & hyperlinks
- Runs ON the internet
- Invented by Tim Berners-Lee, 1989
- Accessed via a browser

💡 *Think of the Internet as roads, and the WWW as the destinations on those roads.*

How Web Browsing Works

Type a URL

1

e.g. google.com

DNS Lookup

2

URL → IP address

Connection

3

Browser connects to server

Request Sent

4

Browser asks for the page

Server Responds

5

Sends HTML, CSS & images

Page Displayed

6

Browser renders the content

⚡ This whole process takes under 2 seconds!

Types of Search Engines

General

Google — 92% share

Bing — Microsoft

Yahoo — via Bing

Specialized

YouTube — Video

Google Images — Images

Scholar — Academic

Amazon — Products

Privacy / Meta

DuckDuckGo — No tracking

Startpage — Private Google

Dogpile — Combines engines

How they work:  Crawl →  Index →  Rank by relevance

Recap: Chapter 1

1 The Internet

A global network of billions of connected devices.

2 Internet vs. the Web

The Web (pages, links) runs on top of the internet.

3 How Pages Load

URL → DNS → connect → request → response → render.

4 Search Engines

General, specialised, and privacy-first each serve a purpose.

Quick check: can you explain the internet vs. the web in one sentence?

Today's Objectives

1

Define a Web Browser

Explain what a browser does and why we need one.

2

Compare Popular Browsers

Identify Chrome, Safari, Edge, Firefox and their strengths.

3

Navigate the Interface

Locate the address bar, tabs, bookmarks bar, and settings.

4

Install & Launch a Browser

Download, install, and set a browser as default.

We'll close with a 4-question recap — keep these four goals in mind.

CHAPTER 02

Understanding Web Browsers

Exploring browsers, their features & how to use them

What is a Web Browser?

Software that lets you access, view and interact with web pages — it translates HTML, CSS & JavaScript into what you see.

Render Pages

Turns code into visible web pages

Handle Interaction

Clicks, forms, keyboard input

Play Media

Images, videos, audio

Security

HTTPS, passwords, pop-ups

Browser History

Popular Web Browsers

Chrome

~65%

General users & developers

Safari

~19%

Apple device users

Edge

~5%

Windows & enterprise users

Firefox

~3%

Privacy-focused users

Brave

~1%

Ad-blocking & privacy

Opera

~2%

Power users & gamers

Browser Interface: Key Parts

Address Bar

Type URL or search. Lock icon = secure HTTPS site.

Tabs

Manage multiple pages. Ctrl+T new, Ctrl+W close.

Nav Buttons

Back, Forward, Refresh and Home.

Bookmarks Bar

One-click access to your favourite sites.

Downloads

Track, open and manage downloaded files.

Settings Menu

History, extensions, print, zoom and preferences.

Ctrl+T New Tab | Ctrl+W Close | Ctrl+L Address Bar | Ctrl+D Bookmark | Ctrl+Shift+T Reopen

Installing & Launching Browsers

How to Install

-  1 Go to the official website (e.g. google.com/chrome)
-  2 Click Download and save the installer file
-  3 Run the installer and follow the wizard
-  4 Sign in to sync bookmarks & settings (optional)

How to Launch

Desktop Shortcut

Double-click the browser icon on your desktop

Start Menu

Press Start, type the browser name, press Enter

Taskbar

Click the pinned browser icon in the taskbar

Set as Default

Settings → Apps → Default apps → Web browser

Always download from official websites only — avoid third-party sites

CHAPTER 03

Effective Browsing

Navigation, tabs, history & smart search techniques

Navigating to Websites

Type URL Directly

- 1 Click address bar (Ctrl+L)
- 2 Type full URL: `https://example.com`
- 3 Press Enter — browser navigates

💡 Browsers auto-add `https://` and `www`.

Use a Search Engine

- 1 Go to `google.com`
- 2 Type keywords or the site name
- 3 Click the correct result from the list

💡 Best when you don't know the exact URL

Other Ways:

Click hyperlinks

Open bookmarks

Browser history

Autocomplete suggestions

Using Tabs & Windows

Open a Tab

Click + or press Ctrl+T
Right-click link → Open in new tab

Switch Tabs

Click any tab or Ctrl+Tab
Ctrl+1 to 8 — jump to tab number

Close & Restore

Click X or Ctrl+W to close
Ctrl+Shift+T restores closed tab

New Window

Ctrl+N opens new window
Drag tab out to separate window

Pin a Tab

Right-click tab → Pin
Kept small and always visible

Mute / Duplicate

Right-click → Mute site
Right-click → Duplicate tab

Ctrl+T New | Ctrl+W Close | Ctrl+Tab Next | Ctrl+N Window | Ctrl+Shift+T Reopen | Alt+Tab Switch Window

Browser History & Navigation

Back

Alt+Left Arrow
Return to previous page

Forward

Alt+Right Arrow
Go to next page

Refresh

Ctrl+R or F5
Reload current page

Home

Go to homepage
Set in browser settings

Using History

- Press Ctrl+H to open history
- Browse by date & time
- Search history with Ctrl+F
- Right-click → Open in new tab

Clear History

- Press Ctrl+Shift+Delete
- Choose time range (last hour / all time)
- Select: history, cache, cookies
- Click Clear data

Smart Search Techniques

Exact Phrase

Use quotes: "computer operator course"
Finds exact phrase, not individual words

Exclude Words

Use minus: jaguar -car -animal
Removes unwanted results

Site Search

site:gov.pk tax information
Search within one specific website

File Type

filetype:pdf NAVTTC curriculum
Find specific file formats (PDF, DOCX)

Filter by Date

Use Tools → Any time
Filter: past hour, day, week, year

Check Credibility

Prefer .edu .gov domains
Verify author, date, and source URL

Pro tip: Combine techniques — [site:wikipedia.org](https://www.wikipedia.org) "artificial intelligence" filetype:pdf

CHAPTER 04

Download & Upload

Managing file transfers between your device and the internet

Download vs. Upload

Download

Internet → Your Device

- Software & apps
- Documents (PDF, Word)
- Images & photos
- Music & videos

VS

Upload

Your Device → Internet

- Email attachments
- Photos to social media
- Videos to YouTube
- Files to cloud storage

⚡ Speed measured in Mbps — 1Mbps: basic browsing | 10–25 Mbps: HD video | 50+ Mbps: 4K & large files

Download speed is usually faster than upload speed

Downloading Files, Images & Videos

How to Download a File

- 1 Click the Download link or button
- 2 Choose a save location (Downloads folder)
- 3 Watch the progress bar at the bottom
- 4 Open the file to verify it downloaded correctly

Save Images

- Right-click → Save image as
- Drag image to desktop
- Click image → Download button

Videos

- YouTube Premium / offline feature
- Social media built-in save options
- Only download what you have rights to use

 **Only download from trusted websites — scan files with antivirus before opening**

Managing Downloads

Open Download Manager

Press **Ctrl+J**
Or click menu →
Downloads

Open / Locate File

Click filename to open
Show in folder to locate it

Change Save Location

Settings → Downloads
Set default folder or ask
each time

Download Safety

Only use trusted sites
Scan with antivirus before
opening

Troubleshooting

⚠ Download failed

Check internet connection, retry, or try a different browser

⚠ Slow download

Check your speed, close other apps using bandwidth

⚠ Virus warning

Stop immediately — find the file from an official source

⚠ Wrong file type

Check file extension — .exe files can be risky on Windows

Uploading Files to Websites

How to Upload

1 Find the Upload / Attach / Browse button

2 Select your file(s) from your computer

3 Watch the upload progress bar

4 Wait for confirmation message

Common Scenarios

Email

Paperclip icon → select file → send

Cloud Storage

Google Drive / Dropbox → New → Upload

Social Media

Photo icon → select media → post

Upload limits: Gmail 25 MB | Google Drive 15 GB free | Facebook video 10 GB | Drag & drop also works!

Saving & Organising Your Files

Folder Structure

Organise by type, date,
or project
Rename files
descriptively

Cloud Backup

Google Drive, Dropbox,
OneDrive
Access from any device,
auto backup

Find Files

Windows key + filename
to search
Ctrl+J for recent browser
downloads

Browser Sync

Sign in to sync
bookmarks, history
passwords & open tabs
across devices

Best Practices

- ✓ Use consistent naming: YYYY-MM-DD_ProjectName for easy sorting
- ✓ Clear Downloads folder monthly — delete files you no longer need
- ✓ Keep cloud + local copies of important files for safety
- ✓ Scan all downloads with antivirus before opening

CHAPTER 05

Browser Settings

Customising your browser for security, privacy & efficiency

Accessing Browser Settings

Chrome

Three dots : → Settings

<chrome://settings>

Firefox

Hamburger ☰ → Settings

<about:preferences>

Edge

Three dots ... → Settings

<edge://settings>

Key Settings Categories

You & Google

Sign-in, sync, personalisation

Search Engine

Default search engine settings

Privacy & Security

Cookies, safe browsing, site data

Downloads

Save location, behaviour

Appearance

Themes, font size, zoom

Autofill

Passwords, payment, addresses

Homepage & Startup Settings

Setting a Homepage

Chrome:

Settings → Appearance → Show Home button → Enter URL

Firefox:

Settings → Home → Homepage and new windows → Enter URL

Popular homepage choices:

- Google.com — Quick search access
- News site — Stay informed
- Company intranet — Work efficiency

Startup Behaviour

1

New Tab Page

Opens blank tab with quick links & shortcuts

2

Continue Where You Left Off

Restores all tabs from previous session

3

Open Specific Pages

Loads a predefined set of websites on start

Privacy & Security Settings

Cookies

Block third-party cookies
Clear cookies on exit
Path: Settings → Privacy → Cookies

Safe Browsing

Warns about dangerous sites
Checks downloads for malware
Path: Settings → Privacy → Security

Site Permissions

Location, camera, microphone
Set to Ask before accessing
Path: Settings → Privacy → Site Settings

Pop-up Blocker

Blocked by default
Allow pop-ups for specific sites
Path: Settings → Privacy → Pop-ups

Password Manager

Save & autofill passwords
Generate strong passwords
Path: Settings → Autofill → Passwords

Private Browsing

Chrome: Ctrl+Shift+N (Incognito)
Firefox: Ctrl+Shift+P
Note: ISP can still see activity

Tip: Press Ctrl+Shift+Delete regularly to clear browsing data for better privacy

Search Engine Preferences

Change Default Search Engine

Chrome:

Settings → Search engine → Manage → Select default

Firefox:

Settings → Search → Default Search Engine →
Dropdown

Edge:

Settings → Privacy & Search → Address bar → Search

Available Options

Google

Most popular, best algorithms (92%)

Bing

Microsoft's engine, integrated in Windows

DuckDuckGo

Privacy-focused, no user tracking

Yahoo

Powered by Bing

Quick search shortcuts: [wiki \[space\] = Wikipedia](#) | [yt \[space\] = YouTube](#) | [maps \[space\] = Google Maps](#)

Appearance & Display Settings

Themes

Browse Chrome Web Store themes
Install with one click, change colours

Font & Zoom

Ctrl + +/- to zoom any page
Settings → Appearance → Font size

Bookmarks Bar

Ctrl+Shift+B to toggle on/off
Organise with folders for quick access

Dark Mode

Reduces eye strain at night
Settings → Appearance → Themes
→ Dark

Toolbar

Show/hide Home, Refresh buttons
Add extension icons to toolbar

Sidebar Panels

Reading list, bookmarks, history
Enable in Settings → Appearance

All appearance settings are in: [Settings → Appearance](#)

CHAPTER 06

Browser Extensions

Enhancing browser functionality with add-ons

What are Browser Extensions?

Small software programs that customise and enhance browser functionality — they add new features, modify web pages, or integrate external services.

Ad Blockers

Block ads & pop-ups
uBlock Origin, Adblock Plus

Password Managers

Store & auto-fill passwords
LastPass, Bitwarden

Productivity

Grammar, note-taking
Grammarly, OneNote Clipper

Security

HTTPS enforcement, privacy
HTTPS Everywhere, Privacy Badger

Safety Guidelines

- Only install from official stores
- Check reviews and ratings before installing
- Review permissions carefully

Potential Risks

- Can access your browsing data
- May slow down the browser
- Malicious extensions do exist

Finding & Installing Extensions

Official Extension Stores

Chrome Web Store

chrome.google.com/webstore

Firefox Add-ons

addons.mozilla.org

Edge Add-ons

microsoftedge.microsoft.com/addons

Installation Steps

1

Find Extension

Search or browse the official store

2

Review Information

Read description, reviews & permissions

3

Click Install

Click Add to Chrome / Firefox / Edge

4

Confirm

Review permissions → Add extension

Before installing — check: ★ 4+ stars 👥 Large user count 📅 Recent reviews 🔒 Permissions listed

Managing Installed Extensions

How to Access Extensions Manager

- Chrome: : → More tools → Extensions or chrome://extensions
- Firefox: ☰ → Add-ons and themes
- Edge: ... → Extensions

Enable / Disable

Toggle switch on card
Disabled extensions don't run

Configure

Click Details →
Extension options
Customise per-extension
settings

Pin to Toolbar

Click puzzle icon → pin
Keeps favourite
extensions visible

Remove Extension

Click Remove or trash
icon
Uninstalls completely
from browser

Troubleshooting

⚠ **Extension not working:**

Disable and re-enable it

⚠ **Browser running slow:**

Disable unused extensions — they consume memory

⚠ **Conflicts:**

Disable one at a time to identify the culprit

Popular & Useful Extensions

Ad Blockers

uBlock Origin — lightweight, efficient

AdBlock Plus — customizable filters

Password Managers

Bitwarden — open-source, free

LastPass — feature-rich, free tier

Productivity

Grammarly — grammar & spell check

OneNote Clipper — save web content

Security

HTTPS Everywhere — forces secure connections

Privacy Badger — blocks trackers

Video

Video DownloadHelper — download videos

Dark Reader — dark mode everywhere

Customisation

Stylus — custom themes for websites

uAutoPagerize — infinite scroll

 Only install extensions you actually need — too many slows down your browser

CHAPTER 07

Bookmarks & Favorites

Organising and accessing your favourite websites efficiently

Understanding Bookmarks

Saved shortcuts to websites you want to revisit — one click instead of typing the URL or searching again. Also called Favorites in some browsers.

Save Time

One-click access to any site

Organise Resources

Categorise by topic or purpose

Never Forget

Remember useful sites permanently

Sync Across Devices

Access bookmarks on phone, tablet, PC

Bookmarks vs. History

Bookmarks

- Manually saved
- Permanent until you delete
- Organised by you in folders

History

- Automatically recorded
- Temporary — auto-deleted over time
- Chronological list only

Creating & Saving Bookmarks

★ Star Icon

- 1 Navigate to the website
- 2 Click the ★ star in address bar
- 3 Edit name & choose folder (optional)
- 4 Click Done

Keyboard Shortcut

Ctrl + D

Instantly bookmarks the current page

Then edit the name and folder in the pop-up that appears

Menu Option

Chrome:

: → Bookmarks → Bookmark this tab

Firefox:

≡ → Bookmarks → Bookmark current tab

All Tabs:

Right-click tab → Bookmark all tabs

When saving you can: rename it, choose or create a folder, and edit it later by right-clicking → Edit

Organising Your Bookmarks

Example Structure

- Work
 - Projects
 - References
 - Tools
- Personal
 - Banking
 - Shopping
 - Social Media
- Learning
 - Courses
 - Articles

Create a Folder

During bookmarking: click dropdown → New folder
In manager: right-click → Add new folder

Move Bookmarks

Drag & drop to new location
Or right-click → Cut → Paste

Rename

Right-click bookmark → Edit → Type new name

Regular Cleanup

Delete unused bookmarks monthly
Check for broken links

Accessing & Using Bookmarks

Bookmarks Bar

Bar below address bar
Ctrl+Shift+B to show/hide
Click any bookmark to open

Search Bookmarks

Type name in address bar
Or use search in Bookmark Manager

Sync Across Devices

Sign in to browser account
Enable sync in settings
Auto-syncs all devices

Import / Export

Manager → Export → Save HTML
Manager → Import → Select file

Opening Bookmark Manager

Chrome: : → Bookmarks → Bookmark manager or Ctrl+Shift+O

Firefox: ≡ → Bookmarks → Manage Bookmarks

Tip: Keep most-used bookmarks on the bar for instant one-click access

Backup bookmarks regularly by exporting to HTML — you can import them on any browser later

CHAPTER 08

Introduction to Email

Understanding electronic mail and its role in communication

What is Email?

Electronic Mail — a method of exchanging digital messages over the internet. Send text, files, images and more to one or many recipients instantly.

How Email Works

1

Compose Message

Write email with recipient, subject, body

2

SMTP Server

Outgoing mail server processes and sends

3

DNS Lookup

Finds the recipient's mail server address

4

Delivered

Email lands in recipient's inbox

Protocols & Key Facts

SMTP

Sending emails (Simple Mail Transfer Protocol)

POP3

Downloading emails to one device

IMAP

Syncing emails across all your devices

Brief History

- 1971: First email sent by Ray Tomlinson
- 1996: Hotmail launches web-based email
- 2004: Gmail introduces 1 GB free storage
- Today: 4 billion+ email users worldwide

Email Service Providers

Gmail

15 GB free

- ✓ Powerful search
- ✓ Spam filtering
- ✓ Google Workspace integration

gmail.com

Students, general users,
businesses

Outlook

15 GB free

- ✓ Office 365 integration
- ✓ Calendar & tasks
- ✓ Focused Inbox

outlook.com

Business & Office 365 users

Yahoo Mail

1 TB free

- ✓ 1 TB storage
- ✓ Customizable themes
- ✓ Disposable addresses

mail.yahoo.com

Users needing large storage

ProtonMail

500 MB free

- ✓ End-to-end encryption
- ✓ Swiss privacy laws
- ✓ Open source

protonmail.com

Privacy-conscious users

Choose based on: [Storage needs](#) | [Tool integrations](#) | [Privacy requirements](#) | [Ease of use](#)

Email Address Structure

john.doe

Local Part (Username)

@ Symbol

gmail.com

Domain Part

Local Part

Identifies your specific mailbox
Can use letters, numbers, dots, underscores
Case-insensitive

@ Symbol

Separates username from domain
Every email address has exactly one @

Domain Part

Identifies the email server
Can be provider's domain or custom business domain

Valid vs. Invalid Examples

- ✓ john.doe@gmail.com
- ✓ jane_doe123@outlook.com
- ✓ support@navttc.gov.pk

- john doe@gmail.com ✗ (space not allowed)
- john@doe@gmail.com ✗ (only one @ allowed)
- @gmail.com ✗ (missing username)

CHAPTER 09

Creating Email Accounts

Step-by-step guide to creating and managing email accounts

Creating a Gmail Account

1

Go to gmail.com

Or accounts.google.com/signup

2

Click 'Create Account'

Select 'For my personal use'

3

Enter Your Name

First name and last name

4

Choose Username

Create your Gmail address

5

Create Password

8+ chars, mixed case, numbers

6

Add Phone Number

For security & account recovery

7

Verify with Code

Code sent via SMS to your phone

8

Add Recovery Email

Optional but strongly recommended

9

Enter Birthday & Gender

Required by Google

10

Agree to Terms

Review and accept Google's Terms

Account created! You can now send & receive emails and access all Google services

Other Accounts & Two-Factor Authentication

Outlook (outlook.com)

- Go to outlook.com
- Click 'Create free account'
- Choose @outlook.com address
- Create a password
- Enter personal information
- Verify phone or email

ProtonMail (protonmail.com)

- Go to protonmail.com
- Click 'Create a free account'
- Choose plan (Free tier)
- Create username & password
- Add recovery email (optional)
- Verify humanity (CAPTCHA)

Two-Factor Auth (2FA)

What it is:

Password + a second verification step (SMS code, authenticator app, or security key)

Setup in Gmail:

Settings → Security → 2-Step Verification → Get started

Personal vs. Professional Email

Personal: john.doe@gmail.com • johndoe2024@outlook.com • Use for personal, social, shopping

Professional: john.doe@company.com • info@business.pk • Use for work, job applications, clients

 *Best practice: Keep personal and professional emails completely separate*

Logging In & Out Securely

Logging In

1

Navigate to Login Page

Go to gmail.com or outlook.com

2

Enter Email Address

Type your full email address

3

Enter Password

Password is hidden as you type

4

Click Sign In

Access your inbox

Forgot Password?

Click 'Forgot password?' → Enter email → Follow verification → Create new password

Logging Out

How:

- Click profile picture/initial (top right)
- Select 'Sign out' or 'Log out'
- Or close browser (if not using Remember me)

Always log out when:

- ⚠ Using a public or shared computer
- ⚠ Leaving your computer unattended
- ⚠ Finished using email for the day

Security tip:

Always check for HTTPS · Don't use Remember me on shared devices · Clear cache when done

CHAPTER 10

Email Account Settings

Configuring preferences, security, and personalisation options

Accessing Email Settings

Gmail Settings

1

Click the Gear  icon

Top-right corner of Gmail

2

Click 'See all settings'

Opens the full settings page

3

Navigate the tabs

General, Labels, Accounts, Filters...

Q

Quick shortcut:

You can also search within settings

Outlook Settings

1

Click gear icon (top right)

2

Settings pane opens on left

3

Search or browse categories

4

Click 'View all Outlook settings'

Settings Categories

General

Language, signature, vacation responder

Filters & Blocked

Create filters, block senders

Labels/Folders

Create and manage folders

Forwarding/IMAP

Forward emails, enable IMAP/POP

Accounts

Import, send mail as, other accounts

Themes

Customise inbox appearance

Profile, Signature & Security

Creating an Email Signature

- 1 Settings → See all settings
- 2 General tab → Signature section
- 3 Click 'Create new' → Name it
- 4 Type your signature in the editor
- 5 Format with toolbar (bold, links, logo)
- 6 Set as default for new emails
- 7 Scroll down → Click 'Save Changes'

Example Signature:

Best regards,
John Doe | Computer Operator | SBTEA Certified
john.doe@email.com · +92-300-1234567

Security Settings

Change Password

Every 3–6 months
8+ chars, mixed case, symbols, unique

Two-Factor Auth (2FA)

Account → Security → 2-Step Verification
SMS, authenticator app, or security key

Recovery Options

Set recovery phone & email
Used to regain access if locked out

Review Account Activity

Check recent devices and locations
Sign out remotely if suspicious

Email Backup & Restore

Google Takeout

takeout.google.com
Select Mail → MBOX
format
Download archive to your
PC

Email Client

Use Outlook or
Thunderbird
Connect via IMAP/POP3
Emails saved locally

Auto-Forward

Forward to a backup
address
Settings → Forwarding &
POP/IMAP

Restore Deleted

Open Trash / Deleted
Items
Select emails → Move to
Inbox
Available for 30 days

Backup Schedule & Best Practices

Personal email: Monthly backup is usually sufficient

Business email: Weekly backup recommended

Critical data: Daily or real-time sync to cloud

Best practices: Backup to multiple locations · Keep backups encrypted · Test restore periodically

CHAPTER 11

Composing Emails

Writing, formatting and sending professional email messages

Creating a New Email

Steps to Compose

- 1 Click Compose Button**
'Compose' button or pencil icon (top left)
- 2 Compose Window Opens**
New window or overlay appears
- 3 Fill in Fields**
To, Subject, Body
- 4 Review Before Sending**
Check recipients, subject & content

Gmail shortcut: Press **C** to open compose instantly

Compose Window

- To:** Primary recipient(s) — required
- CC:** Carbon copy — visible to all recipients
- BCC:** Blind carbon copy — hidden recipients
- Subject:** Brief description of email content
- Body:** Main message content
-  Attach  Link B I U Font Send →

Email Recipients: To, CC & BCC

To

Primary recipient

When to use:

- Main person who needs to act
- Direct recipient of information
- Required — must have at least one

Examples:

- Sending report to your manager
- Asking a question to a colleague
- Submitting assignment to teacher

CC

Carbon Copy — visible to all

When to use:

- Keep someone in the loop
- Transparency — others can see the CC
- Secondary stakeholders

Examples:

- CC manager on project updates
- Inform team of a decision
- Keep client informed of progress

BCC

Blind Carbon Copy — hidden

When to use:

- Protect privacy in mass emails
- Hide recipient list from others
- Secretly inform someone

Examples:

- Sending newsletter to subscribers
- Announcing to a large group
- Confidential copy to management

Multiple addresses: separate with commas — john@email.com, jane@email.com | Avoid unnecessary Reply All!

Writing Effective Subject Lines

Open Rate

Clear subjects get opened; vague ones get ignored

Searchable

Good subjects make emails easy to find later

Priority

Helps recipients prioritise their inbox

Good Subject Line Examples

- ✓ Meeting Request: Project Review – Jan 15, 2 PM
- ✓ Action Required: Approve Q4 Budget by Friday
- ✓ Question: Client Proposal Deadline Extension?
- ✓ Update: Website Redesign – Phase 1 Complete

Poor Subject Line Examples

- X Hey
- X Meeting
- X IMPORTANT!!!
- X Question...

Useful Prefixes & Best Practices

[Action Required]

[FYI]

[Urgent]

[Meeting]

[Update]

Email Body & Formatting

Email Structure

1

Greeting

Formal: Dear Mr./Ms. [Last Name],
Semi-formal: Hello [First Name],
Casual: Hi [First Name],

2

Opening

Brief context or purpose
'I'm writing to...' / 'Following up on...'

3

Body

Main content in short paragraphs
One idea per paragraph

4

Closing

Summary or call to action
'Please let me know...' / 'Kindly review...'

5

Sign-off

Formal: Sincerely, / Best regards,
Casual: Best, / Thanks,

Formatting Tools

Bold & Italic

Emphasise key words

Bullet Points

Organise lists clearly

Font Size & Colour

Highlight important info

Hyperlinks

Insert clickable URLs

Before Sending Checklist

- ☒ Proofread for typos and grammar
- ☒ Verify recipient addresses are correct
- ☒ Attachments added if mentioned
- ☒ Tone is appropriate and professional

Sending & Receiving Emails

Sending Emails

1

Review Your Email

Check recipients, subject, content & attachments

2

Click Send Button

Usually the blue Send button

3

Confirmation

Appears in Sent folder immediately

 Gmail: 5–30 sec Undo Send window after clicking Send

Receiving Emails

- New email notification (sound, badge, browser alert)
- Click email in inbox to open
- Read content and check attachments
- Check sender name and timestamp

 Related emails group into Threads for easy tracking

Reply, Forward & Email Status

Reply

To sender only · Open email →
Click Reply

Reply All

To all recipients · Use carefully!

Forward

To new recipient · Add message
→ Send

CHAPTER 12

Attachments & File Handling

Managing file attachments in email communication

Attaching Files to Emails

Standard Method

1

Open Compose Window

New email or reply

2

Click Paperclip Icon

In the toolbar at the bottom

3

Select Files

Browse computer and select file(s)

4

Wait for Upload

Watch the progress indicator

5

Send Email

Attachment appears at bottom of compose

Drag & Drop Method

1. Open file explorer
2. Locate the file(s)
3. Drag into compose window
4. Release to attach

Large File Solutions

Google Drive:

Insert > Drive link in compose

Compress (ZIP):

Reduce size before attaching

File Sharing:

WeTransfer, Dropbox links

Quick Tips

Ctrl+Shift+A to quickly attach in Gmail

✕ Click ✕ next to attachment name to remove it before sending

Types of Attachments

Documents

- PDF (.pdf) — preserves formatting
- Word (.doc/.docx)
- Excel (.xls/.xlsx)
- Text (.txt) — plain text

Images

- JPEG (.jpg) — compressed photos
- PNG (.png) — high quality
- GIF (.gif) — animated
- BMP (.bmp) — uncompressed

Media Files

- MP4 (.mp4) — video
- MP3 (.mp3) — audio
- AVI (.avi) — video format
- WAV (.wav) — audio format

Compressed

- ZIP (.zip) — most common
- RAR (.rar) — alternative
- 7Z (.7z) — high compression
- Use to reduce file size

Presentations

- PowerPoint (.ppt/.pptx)
- PDF (.pdf) — converted slides
- Google Slides export
- Impress (.odp)

Blocked Types

- Executables (.exe, .bat)
- Scripts (.js, .vbs)
- If blocked: zip it first
- Email provider blocks for security

Downloading Attachments Safely

How to Download

1

Direct Click

Click filename or download icon → saved to Downloads

2

Save to Specific Folder

Right-click → Save as → choose location → Save

3

Preview Without Download

Click to preview PDFs/images in browser

Red Flags — Don't Open!

- ⚠ Unknown or unexpected sender
- ⚠ Suspicious extension (.exe, .scr, .zip)
- ⚠ Generic message 'Please see attached'
- ⚠ Urgent/threatening language
- ⚠ Spelling and grammar errors

Safety Steps Before Opening

- ✓ Verify sender's full email address
- ✓ Scan with antivirus before opening
- ✓ Don't enable macros in Office files
- ✓ When in doubt — contact sender first

Applications to Open Attachments

PDF → Adobe Reader · Word → Microsoft Word / Docs · ZIP → File Explorer / 7-Zip · Image → Photo viewer

CHAPTER 13

Managing Spam

Identifying, preventing and handling unwanted emails

Understanding Spam Emails

Spam = Unsolicited bulk email sent to many recipients — used for advertising, phishing or spreading malware.

How Spammers Get Your Email

Email Harvesting:

Bots scan websites for posted addresses

Data Breaches:

Stolen databases sold on dark web

Unsubscribe Scams:

Clicking 'unsubscribe' confirms your email

Purchased Lists:

Companies sell customer email lists

Common Spam Types

- Advertising and promotions
- Phishing (fake bank emails)
- Lottery / prize scams
- Fake invoices or payment requests
- Malware distribution links
- Tech support scams

Spam by the Numbers

45–50% of all emails are spam

14.5B spam emails sent daily

\$20B lost to spam annually

Identifying Spam & Spam Folder

▶ Warning Signs of Spam

⚠ Suspicious Sender:

Unknown address, misspelled domain (gmail.com)

⚠ Subject Red Flags:

ALL CAPS, excessive punctuation, too-good-to-be-true

⚠ Hover Before Clicking:

Hover links to reveal actual URL — check for mismatches

⚠ Suspicious Attachments:

.exe, .scr, password-protected ZIPs

⚠ Content Clues:

Grammar errors, generic greeting, requests for info

📁 Managing Your Spam Folder

Check Regularly:

Review weekly for false positives

Report Spam:

Mark unwanted emails → trains the filter

Empty Spam:

Delete or auto-purged after 30 days

Mark Not Spam:

Opens email → 'Not spam' → moves to inbox

Block Sender:

Open spam → Block sender → auto-spam future

Accessing Spam Folder

Gmail: Left sidebar → Spam | Outlook: Left sidebar → Junk Email | Yahoo: Left sidebar → Spam | Auto-deleted after 30 days

Preventing Spam

Protect Your Email

Don't post on public sites
Use separate email for signups
Read privacy policies on forms

Unsubscribe Wisely

Only unsubscribe from legit emails
NEVER unsubscribe from actual spam
— it confirms your email is active!

Use Email Filters

Auto-sort or delete unwanted mail
Create rules for known senders
Report spam to improve filters

Security Features

Keep spam filter on
Use email aliases
Different addresses per purpose

Advanced Privacy Tools

Disposable Email Services:

- temp-mail.org — temporary addresses
- 10minutemail.com — expires automatically
- guerrillamail.com — anonymous email

+ Gmail Plus Addressing

Create variations of your email address:

john@gmail.com

john+shopping@gmail.com

john+news@gmail.com

CHAPTER 14

Email Organisation

Managing inbox efficiently with folders, labels and filters

Folders, Labels & Archiving

Folders (Outlook / Yahoo)

Like file cabinets — emails stored in one folder at a time

Create: Right-click in sidebar → New Folder → name it
Move: Select email → click folder icon → choose destination

Labels (Gmail)

Like tags — one email can have multiple labels at once

Create: Left sidebar → Create new label → name it
Apply: Select email → label icon → tick label(s) to apply

Folder Organisation Tips

- Create folders per project / client
- Use year sub-folders (2024, 2025)
- Archive completed projects
- Keep inbox for action items only

Archiving Emails

Remove from inbox without deleting:

- ✓ Gmail: click archive icon or press E
- ✓ Outlook: Move to Archive folder
- ✓ Still fully searchable — not deleted

Colour Coding Labels (Gmail) & Benefits of Organisation

Right-click label → Label colour → pick a colour

Benefits: Organise by project · Reduce inbox clutter · Find emails faster

Email Search & Filters

Search Operators (Gmail)

from:john@email.com

Emails from a specific sender

to:jane@email.com

Emails sent to someone

subject:meeting

Keyword in subject line

has:attachment

Emails with files attached

after:2024/01/01

Emails after a date

Creating Filters / Rules

What filters can do automatically:

- Label / organise emails
- Mark as read automatically
- Forward to another address
- Star / flag important emails
- Delete automatically

Create a Filter in Gmail:

- 1 Settings → See all settings
- 2 Filters and Blocked Addresses tab
- 3 Click 'Create new filter'
- 4 Set criteria (from / subject / etc.)
- 5 Choose action → Create filter

Starring, Priority Inbox & Flagging

★ Gmail: Click star icon — find all starred in 'Starred' folder | ► Outlook: Click flag icon | 📁 Priority Inbox learns from your behaviour

Email Etiquette & Best Practices

✓ Do's

✓ Respond Promptly

Aim to reply within 24–48 hours

✓ Use Clear Subject Lines

Help recipients understand the email's purpose

✓ Proofread Before Sending

Check spelling, grammar, and recipients

✓ Be Concise

Get to the point — use short paragraphs

✓ Use Professional Language

Avoid slang and emojis in formal emails

✗ Don'ts

✗ Use ALL CAPS

Comes across as shouting

✗ Reply All Unnecessarily

Only reply all when everyone needs to see it

✗ Send Large Attachments

Use Drive or file sharing links instead

✗ Forward Chain Emails

Avoid spreading misinformation

✗ Send Sensitive Info

Never send passwords or ID numbers via email

Response Times & When Not to Use Email

⚡ Urgent: Within hours | 📅 Normal: 24–48 hours | ⌚ Non-urgent: Within a week

Avoid email for: complex/sensitive discussions · immediate responses · delivering bad news

CHAPTER 15

Internet Safety

Staying safe, private, and secure online

Recognizing Phishing & Scams

1

Fake Login Pages

Copycat sites that steal your username and password when you sign in.

2

Urgent, Scary Language

“Your account will be closed in 24 hours” pressures you to act fast.

3

Too Good to Be True

Prize winnings or free money you never entered to win.

4

Mismatched Links

Hover over any link first — the real URL often gives it away.

Rule of thumb: when in doubt, don't click — go to the site directly instead.

Safe Browsing Habits

1

Check for HTTPS

Look for the padlock icon before entering any personal information.

2

Be Careful on Public Wi-Fi

Avoid online banking or entering passwords on open networks.

3

Download from Trusted Sources

Stick to official sites and app stores, not random pop-ups.

4

Keep Software Updated

Updates often patch security holes that attackers exploit.

A padlock icon means the connection is encrypted — not that the site is trustworthy.

Passwords & Account Security

1

Use Strong, Unique Passwords

12+ characters, mixed case, numbers, and symbols
— never reused.

2

Try a Password Manager

Bitwarden or similar tools generate and remember
passwords for you.

3

Turn On Two-Factor Authentication

A second step — SMS, app, or key — blocks most
account takeovers.

4

Never Share Your Password

Not with coworkers, not over email or chat, not ever.

Reminder: you already practiced 2FA setup back in Chapter 9.

Protecting Your Privacy Online

1

Think Before You Share

Personal details posted online can be used to guess passwords or scam you.

2

Review Privacy Settings

Check who can see your posts, photos, and personal information.

3

Lock Your Device

A PIN or password stops others from accessing your accounts directly.

4

Log Out on Shared Computers

Especially in labs, cafes, or anywhere others use the same machine.

Your digital footprint is everything you've ever posted, searched, or shared.

CHAPTER 16

Cloud Storage

Uploading, organizing, sharing, and syncing files online

What Is Cloud Storage?

1

Files Stored Online

Saved on remote servers instead of only on your computer.

2

Popular Services

Google Drive, OneDrive, Dropbox, and iCloud are common choices.

3

Local vs. Cloud

Local = one device only. Cloud = any device, anywhere.

4

Free Storage Limits

Most services offer 5–15 GB free, with paid plans for more.

You already saw cloud backup mentioned back in Chapters 4 and 10.

Uploading & Organizing Files

1

Drag & Drop to Upload

Drop files straight into your browser window to upload them.

2

Create Folders

Group related files together, just like on your computer.

3

Rename Clearly

Use consistent, descriptive names so files are easy to find.

4

Check Your Storage

Keep an eye on used vs. available space.

A little organization now saves a lot of searching later.

Sharing & Collaboration

1

Share via Link

Generate a link instead of attaching large files to email.

2

Viewer, Commenter, or Editor

Choose the right permission level for each person.

3

Real-Time Co-Editing

Multiple people can work on the same document at once.

4

Revoke Access Anytime

Remove someone's access the moment they no longer need it.

Always double-check who a link is shared with before sending it.

Syncing & Accessing Anywhere

1

Desktop Sync App

Installs a folder on your computer that mirrors the cloud.

2

Mobile Access

Open, edit, and upload files right from your phone.

3

Offline Availability

Mark files “available offline” to use them without internet.

4

Automatic Updates

Changes sync to every device within seconds.

Sync means you never have to email yourself a file again.

Practice Exercise

1

Upload a File

Drag and drop a file into Google Drive or a similar service.

2

Create a Folder

Make a folder and move your uploaded file into it.

3

Share as Viewer

Share the file with a classmate, set to “Viewer” only.

4

Check Your Storage

See how much free space you have left.

Take 10 minutes — pair up if you'd like, then we'll review together.

Module Complete!

1

Browse & Search Confidently

Browsers, extensions, bookmarks, and effective search.

2

Manage Email Like a Pro

Accounts, settings, composing, attachments, organization.

3

Stay Safe Online

Spam awareness, phishing, passwords, 2FA, and privacy.

4

Work with Cloud Storage

Upload, organize, share, and sync files anywhere.

Congratulations! — Presented by Sir M.Khan Jamali, Hunar Institute of Vocational Training, Dadu
