What is a File?

A file is any piece of work or information saved on your computer. Every file has two main parts.

1. The Name

This tells you what is inside. You can write any name you like so you can find it easily later.

2. The Extension

The few letters at the end (like .docx). It tells the computer what kind of file it is, so it knows which program to open.

homework.docx

← NAME

EXTENSION →

You can rename the Name part anytime — just don't touch the Extension.

Common File Types

Extension	What it is	What opens it
.docx	Word Document	For writing letters or essays
.xlsx	Spreadsheet	For lists, math, and tables
.pptx	Presentation Deck	For showing slides
.pdf	Portable Document	For reading files that do not change
.jpg / .png	Pictures	For looking at photos or drawings
.mp3 / .mp4	Audio / Video	For playing music and movies
.txt	Plain Text File	For simple notes in Notepad

 The extension after the dot tells your computer which program to use — never delete it!

What is a Folder?

 A folder is like a virtual box you use to keep your files neat and organized so your computer does not look messy.

Folders Inside Folders

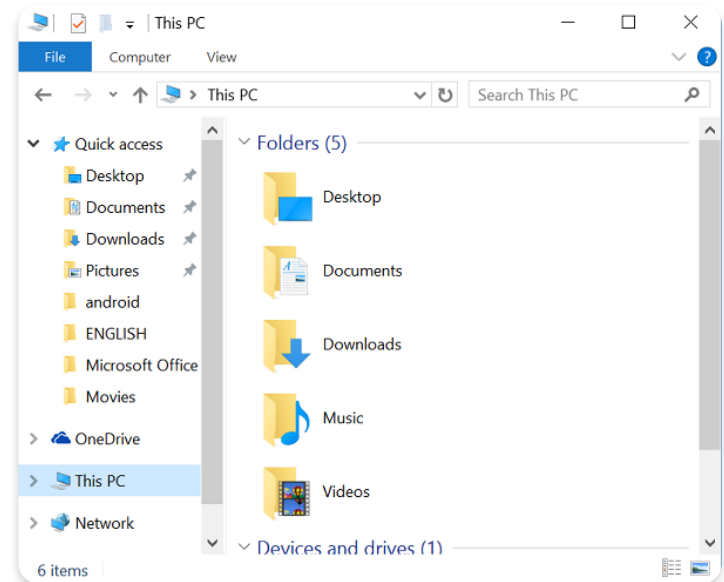

You can put folders inside other folders to make sub-folders and organize deeper.

No Dot Names

Unlike files, folders do not have dots or extra letters at the end of their name.

 Cabinet = Computer · Drawers = Folders · Papers = Files

Hidden folders in File Explorer

File Explorer

The built-in tool in Windows 10 that helps you look through, open, and organize all your files and folders.

Win

E

Opens File Explorer instantly

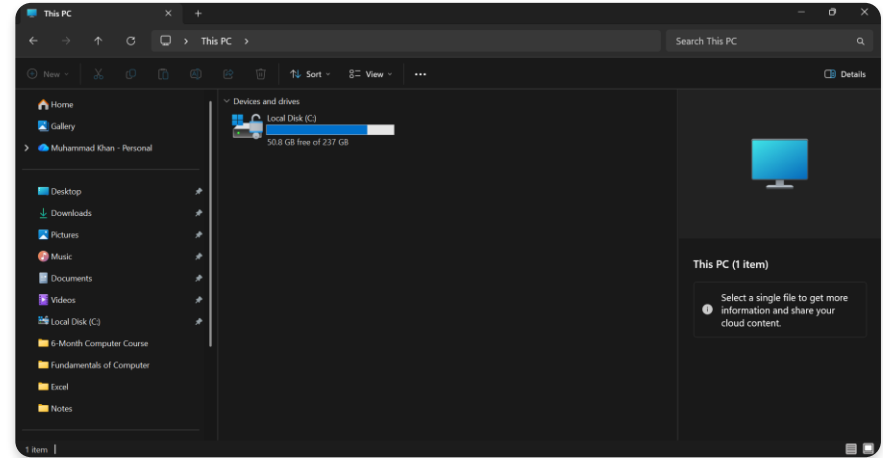

This PC

Click here to see your main storage drives (like C: or D:) and USB sticks.

Downloads

The place where files go when you download them from the internet.

The File Explorer window in Windows 10

How to Make a New Folder

Follow these three simple steps to create a new folder and keep your files in order.

1

Go to a Place

Open File Explorer and find where you want to make the folder, like on the Desktop.

2

Right-Click Menu

Right-click empty space. Move the mouse to New, then click Folder.

3

Write a Name

Type a simple name for your folder and press Enter.

⚡ Fast shortcut: Ctrl + Shift + N creates a new folder instantly.

Changing a Name

If you want to change the name of a file or folder, you can do it in two easy ways.

Way A: Keyboard

Click on the file or folder once to select it. Press F2. Type the new name and press Enter.

Way B: Right-Click

Right-click the file or folder. Choose Rename. Type the new name and press Enter.

Important: never change the letters after the dot (like .docx). If you do, your computer might not be able to open the file!

Symbols You Cannot Use

Windows does not let you use certain special symbols when naming files or folders — the system reserves them for background tasks.

ⓘ If you try to use one of these, Windows will show an error and will not let you save it.

How to Name Your Files

Use Simple Names

Write clear names like “English Homework” instead of random letters like “abc”. This helps you find them easily.

Leave the Dot Alone

Do not touch the letters after the dot (like .docx). If you change them, your file will not open correctly.

Keep Screen Clean

Do not save every file on your main desktop screen. Create folders and put files inside them.

☒ Good naming habits save you time later — you'll always know where to find things.

Easy Practice Activity

 Goal: Practice making and naming folders, just like a real computer user.

1

Setup

Go to your Desktop. Make a new folder named "My Work".

2

Folder Inside Folder

Open My Work. Inside, make another folder named "Day 10".

3

Change Name

Click Day 10 once, press F2, and change its name to "Practice".

✓ Check: Open "My Work" → "Practice" should be the folder name inside.

Review & Questions

Great job! You now understand files, folders, extensions, and easy ways to keep your computer neat.

What is a File?

A Name plus an Extension, like homework.docx

What is a Folder?

A box that organizes files and can hold sub-folders

Naming Rules

No forbidden symbols — and never touch the extension

File Explorer

The tool to navigate, rename, and organize everything

Ask yourself: are you ready to build folders, rename files safely, and find things quickly using File Explorer?
